`txt2tags` syntax.

Picoloop Tutorial (PocketChip version)

Welcome to **Picoloop**!

Picoloop is a synth and a step sequencer made by Yoyz. In this tutorial, we'll make a tour of the basic functionalities of **Picoloop**. The commands described here are adapted for the usage on PocketChip.

Contents

Picoloop Tutorial (PocketChip version)	i
Starting	iii
Entering notes	v
Saving and loading music	viii
Exploring new horizons	x
Picoloop Memo (PocketChip version)	xii
.	xiv
Other commands	xvi

Right Ctrl + ←/→	copy value left or right
Right Shift + ←/→	insert or delete value (shift patterns)

PSH menu	
Right Shift +↑	Increase the track size (16 steps block)
Right Shift +↓	Decrease the track size (16 steps block)
Right Shift +→	Increase the track size (1 step)
Right Shift +←	Decrease the track size (1 step)
TAB and Backspace	Navigate into the new steps (-16 or +16)

L/S menu

Bank	
<code>(Right Ctrl) + ↓</code>	Save the current track on the selected slot
<code>(Right Shift) + ↓</code>	Save your current pattern (group of 4 tracks)
<code>(Right Ctrl) + ↑</code>	Load a track (replace current)
<code>(Right Shift) + ↑</code>	Load a 4 tracks pattern

Song position (order list)	
<code>(Right Shift) + ↑</code>	Define Loop start position
<code>(Right Shift) + ↓</code>	Define Loop end position
<code>(Right Ctrl) + ↑/↓</code>	Change the values

Starting

First, get **Picoloop** at <https://github.com/yoyz/audio/>

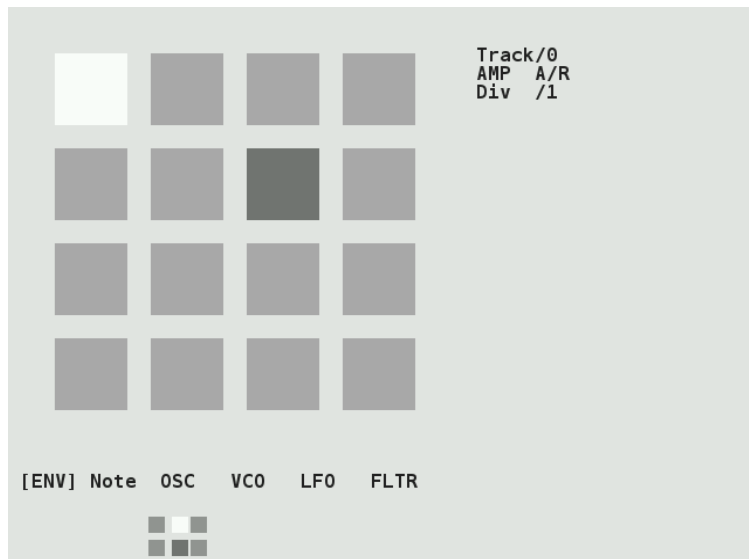

Run the **Picoloop** binary. You will be presented to a setting panel. Navigate with `←`, `→`, `↑` and `↓` and choose the color theme (palette) you prefer.

Then make sure the AudioInput matches your soundcard. Eventually make it select "default".

```
Current palette : 4
Current Bank    : 0
> AudioOutput   : 1/1 : default
MidiOutput      : 0/1 : Midi Through 14:0
MidiInput       : 0/2 : Midi Through 14:0
MidiClockMode   : Internal
```

To exit this panel and start making music, validate with **(Right Shift)**. In the case it crashes, it might be because the soundcard configuration was not correct. Restart the binary and select another card setting.

You will be presented to the **Picoloop** main window.

With this color scheme, the 16 steps are in light grey. The moving dark grey cursor is the current sounding note. The cursor for edition is in white and you cannot move it right now

(Backspace)	go to the previous 16 step on the same track
(ESC)	call menu2 or menu1

Edit mode	
← / →	select next step
↑ / ↓	select step+4, step-4
(Right Ctrl)	enter a note in a step, it works as a cut/paste
(Right Shift) + ←/→/↑/↓	edit the current step
(Right Shift)	do nothing
(TAB)	go to the next 16 step on the same track
(Backspace)	go to the previous 16 step on the same track
(ESC)	call menu2 or menu1
(Enter)	cycle between the different parameters

Picoloop Memo (PocketChip version)

Menu mode	
← / →	move backward/forward the menu
↑ / ↓	select the track from 0 to track 3
Right Ctrl	do nothing
Right Shift + ←/→/↑/↓	edit all step at once
Right Shift	enter the edit mode
TAB	go to the next 16 step on the same track

(you're in *Menu mode*). Below the 16 steps is the menu. It displays:

```
[ ENV ] Note OSC VCO LFO FLTR
```

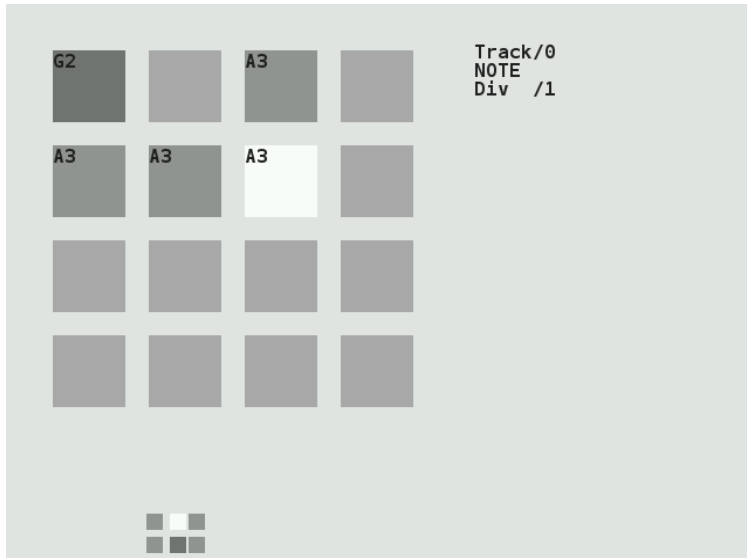

Move left or right to select the parameter you want to use.

Entering notes

At the moment, select Note with the **Right Ctrl** key. Now you are in *Edit mode*, and you can navigate within the 16 steps with the ←, →, ↑ and ↓ arrows. Insert your first note with the **Right Shift** key. It will be a C2.

You can change the value of this note by holding **Right Ctrl** and typing on the arrows. ← or → for decreasing or increasing 1/2 tone, ↑ or ↓ for increasing or decreasing 1 octave. Make it for example G2. Now select other empty cases and type **Right Shift** for adding more notes and **Right Ctrl** for changing their values. Delete an existing note with **Right Shift**. The next note entered with

Right Shift will be the previous value which was deleted (delete an A3, next one will be A3 then).

There are 4 tracks which can play together. To change the current working track, go back to the menu with the **ESC** key. Use the \uparrow and \downarrow arrows to select the track. It will display Track/0, Track/1 etc. Now you can enter more notes in this other track.

To change the sound of the current notes, select ENV in the menu, and validate with **Right Ctrl**, the menu will disappear, meaning

- Mdrum : MDA Drumsynth
 - Mdiout : midi out
 - Tsynth : Twytch/Helm. Needs high resources.
 - O303 : based on Open303, a free, open source emulation of the Roland TB-303 synthesizer. Needs high resources.
 - Csynth : Cursynth, a soustractive synth with 2 oscillators. Needs high resources.
 - PBS : PBSynth, another soustractive synth with 2 oscillators (lightweight).
 - Pdrum : Picodrum, for making rythms (kicks, hats, snares...)
 - OPL2 : FM synthesis
- On some less powerful machines, the high resources engines are not enabled.

Now you can assemble your tracks with the order list (under the Song Position label). Go into this list with the **Enter** key.

You can define Loop start position with **Right Shift** + **↑**. As soon as you define this, the song will start to play. And you can define Loop end position with **Right Shift** + **↓**. Change the values of the list with **Right Ctrl** + **↑/↓**

Exploring new horizons

As we've seen earlier, we can change the pitch value (note) of a step, but also some parameters such as A/R (enveloppe), OSC (oscillator), VCO (a kind of mixer), LFO and FLTR (filter).

But we can also change the whole engine, using the "MAC" menu in *menu2*. The different engines are (from up to down):

- Psynth (default) : PicoSynth, soustractive synth with 2 oscillators (lightweight).

you can enter notes or change values. In the ENV parameters, you can alter the sound with **Right Ctrl** + arrows. Try to play with the two parameters. You end up with something like that:

Now if you type the **Enter** key, you'll access more parameters, which you can change in a similar way. In this mode, you alter parameters for individual notes, if you want to change all the inserted notes for the current track, exit the *edit mode* with the **ESC** key, and use

Right Shift + arrows to change all the steps together.

Saving and loading music

Now it's time to save your work!

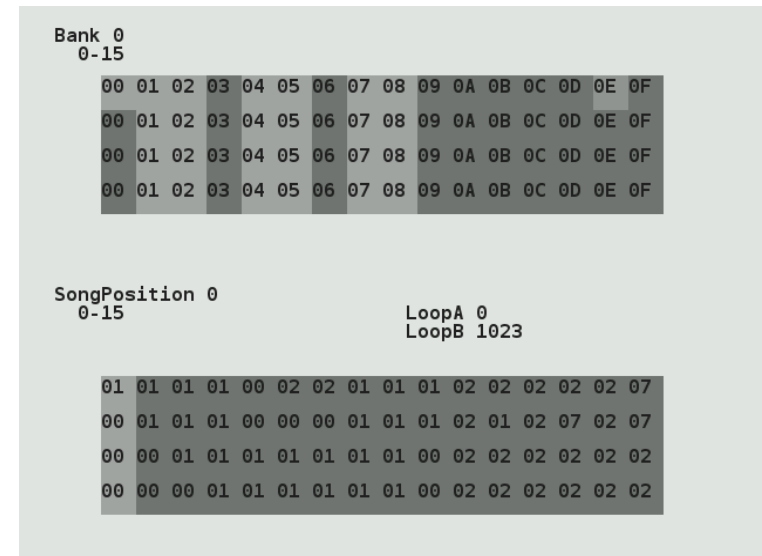

Exit the *edit mode* with **ESC** if you're still in it, and type again **ESC** to enter the second menu (*Menu2*).

It will display:

```
L/S [ BANK ] PSH MAC FX BPM
```

Select L/S (*Load/Save*) and enter the menu with **Right Ctrl**.

It will look like this:

The menu on top represents your tracks. The cursor on this screenshot is on the top 0E column. To save an individual track, select an empty slot and type **Right Ctrl** + ↓. Now the slot will be lighter (with this grey theme). To save all the 4 tracks (one pattern), type **Right Shift** + ↓, the whole column will be lighter.

To reload you tracks later, select a column and type **Right Shift** + ↑. To load an individual slot, type **Right Ctrl** + ↑. Beware, there is no warning so it might erase your current work.
